Do you have epilepsy and are not taking lamotrigine?

Adults 18 and older are needed for a single dose medication research study.

What

The purpose of this research study is to determine whether two different generic versions and the brand version of the medication lamotrigine will perform in a similar way when given to people with epilepsy as a single dose once every two weeks in a period of twelve weeks.

The study drug Lamictal® (brand) and both of the two generic versions of lamotrigine are approved by the United States Food and Drug Administration (FDA) for the treatment of seizures.

Who

Adults 18 years and older who have epilepsy and are not taking lamotrigine may be eligible to participate.

Where

The study is being conducted by Dr. Michel Berg, MD, at Strong Memorial Hospital.

Compensation

Participants will receive up to $1975 for study related time and travel.
